I 次の文章を読み、設問に答えなさい。なお、文章の左にある数字は段落の番号を表しています。
(34点)

- 1 The first floating wind farm is located 25 kilometers from the northern city of Peterhead, off the coast of Scotland. It rides some of the stormiest waters in the North Sea. It was a big ⁽¹⁾gamble and has taken ten years to develop. The company that developed these turbines* is Hywind Scotland Ltd, which is ⁽²⁾backed by Equinor (75%), a Norwegian company, and Masdar (25%) of the United Arab Emirates (UAE).
- 2 Offshore wind farms on the continent of Europe are based in shallow water. They were started as renewable energy options with a high price tag. However, they have now become a ⁽³⁾mainstream power source. But they are not as successful as Hywind Scotland.
- 3 The reason for the success of the Scottish wind farms is their size and location. The five 6-megawatt (MW) floating turbines stand above the sea at 175 meters and reach down to 75 meters below the surface. This balances the huge tower and the rotor blades* that are 154 meters in diameter. Three suction anchors* hold each turbine in place. Their ⁽⁴⁾enormous height above the sea combined with their location far out to sea means that they catch a steady wind. Thus, they are able to provide more power, more ⁽⁵⁾evenly than their rivals.
- 4 In 2015, after 2 years of tests off the Norwegian coast, the company was

given permission to ⁽⁶⁾install a wind farm in Scotland. Manufacturing started in Spain, Norway and Scotland with a budget of 152 million British pounds (GBP). ⁽⁷⁾Designed to power 20,000 homes, Hywind Scotland was commissioned* in 2017 at a final cost of 264 million GBP, three times the cost of offshore wind farms and ten times the cost of natural gas.

5 However, after three years ‘Hywind Scotland’ is breaking world records for maximum energy output. Equinor, a major energy company, says that its investment has paid off* and that Hywind Scotland has cut costs by 40%. The floating wind farm has global ⁽⁸⁾potential.

6 Scottish Renewables Chief Executive said, “Hywind’s ⁽⁹⁾presence in Scottish waters is a reminder that as the windiest country in Europe with some of the deepest waters, Scotland is perfectly placed to take advantage of floating turbine technology.”
